

Insurance Data/Intelligence

From the business perspective, data collected from the operation can be used for decision making by analytics that contains some factual information with visual graphs, so we can make some insights.

Followings are the major areas actively use Data/Intelligence now a days by most of leading companies.

1. Data Warehouse for forecasting, strategy planning, research and etc.
2. Real-time Dashboard based on big-data which can show growth curve or any alarm
3. Artificial Intelligence by Machine Learning for Clustering, Recommendation, Automated Underwriting, and etc.
