

JSON file management in PHP

PHP provides strong solutions for JSON. **json_encode**(\$src_obj) converts obj to JSON text. **json_decode**(\$src_text) converts text string to JSON object.

```
<?php

$arr = array('a' => 1, 'b' => 2, 'c' => 3, 'd' => 4, 'e' => 5);

echo json_encode($arr);

?>
```

```
<?php

$json = '{"a":1,"b":2,"c":3,"d":4,"e":5}';

var_dump(json_decode($json));
var_dump(json_decode($json, true));

?>
```
