

firewalld on CentOS 7

When the server is directly connected to the internet, the firewall is to be setup for security purpose. On CentOS 7, FirewallD is a kind of minimum requirements in terms of security point of view. You can simply install FirewallD by **sudo yum install firewalld** and add policy by **sudo firewall-cmd --zone=public --permanent --add-service=http**

STEP 1. Install FirewallD

```
sudo yum install -y firewalld
```

STEP 2. Enable FirewallD

```
sudo systemctl enable firewalld  
sudo reboot
```

STEP 3. Verify that the service is running and reachable

```
sudo firewall-cmd --state
```
