

Enable internet proxy on windows by changing registry key

The code here simply set EnableProxy property to checked on Control Panel like below

The below is the actual code in Delphi

enable_proxy.pas

```
uses System.Win.Registry;

procedure EnableProxy;
var
  myReg: TRegistry;
begin
  myReg := TRegistry.Create( KEY_SET_VALUE);
  try
    myReg.RootKey := HKEY_CURRENT_USER; // or HKEY_LOCAL_MACHINE
    if myReg.OpenKey('Software\Microsoft\Windows\CurrentVersion\Internet Settings\', true) then
      try
        myReg.WriteInteger('ProxyEnable', $00000001);
      finally
        myReg.CloseKey;
      end;
    end;
  finally
    myReg.Free;
  end;
Close;
end;
```
