

# Software Engineering

- [Rollout Plan Process for Development](#) — A rollout plan is a description of how to get your change successfully applied to production and working as expected. The process of creating a rollout plan is often more valuable than the plan itself because you will invest time in thinking about what needs to be done to achieve success.
- [Semantic Software Versioning](#) — Semantic versioning (also known as SemVer) is a versioning system that has been on the rise over the last few years. It has always been a problem for software developers, release managers and consumers. Having a universal way of versioning the software development projects is the best way to track what is going on with the software as new plugins, addons, libraries and extensions are being built almost every day. This problem can be solved by Semantic Versioning. In brief, it's a way for numberi
