

Severity Levels in QA(Quality Assurance) Test

Severity Levels : Types of Severity of Bug/Defect may be divided into four categories in software testing

- S1 : This flaw implies that the process has been completely shut off, and no further action can be taken.
- S2 : Major This is a significant flaw that causes the system to fail. Certain elements of the system, however, are still operational.
- S3 : Medium It results in some unfavorable behavior, but the system remains functioning.
- S4 : Low It won't create any serious system failures.
