

# Uninstall confluence standard in CentOS 7

Unfortunately, confluence package does not provide uninstaller, so you need to erase all associated files and settings manually.

```
#!/bin/bash
sudo service confluence stop
sudo rm -rf /var/atlassian/application-data/confluence
sudo rm -rf /opt/atlassian/confluence
sudo rm -rf /etc/rc.d/init.d/confluence
sudo userdel confluence
sudo rm -rf /home/confluence
```
