

# Checkout service architecture in AWS for e-commerce website

Managing the checkout process involves many steps, which have to be coordinated. Some steps such as credit card transactions, are subject to specific regulatory requirements. Other parts of the process involve manual labor, such as picking, packing, and shipping items from a warehouse.

Customers may expect their private data, such as their purchase history and their credit card information, to be managed on a secure infrastructure and application stack.

- AWS has archived multiple security certificate relevant to e-commerce business, including Payment Cards Industry (PCI) Data Security Standard (DSS).

**Gliffy Macro Error**
